**Brighten your outlook
on Stress-Related Therapy**

CatosalTM
(10% Butaphosphan+cyanocobalamin) Sterile Solution

The Simple Addition to Therapy

See the difference an effective adjunct therapy can make.

When off-feed stresses result in animals suffering from vitamin B12 and phosphorus deficiencies, recovery can look pretty bleak.

Nutrient deficiencies frequently occur in animals that are stressed or that experience conditions that result in inadequate feed intake. Catosal™ (10% Butaphosphan+cyanocobalamin) Sterile Solution treats and prevents vitamin B12 and phosphorus deficiencies in dairy cattle, beef cattle and swine. It's the first and only prescription B12 and phosphorus injectable, and the only one to feature Butaphosphan, a unique organic source of phosphorus.

Veterinarians and producers worldwide have turned to Catosal as an adjunct therapy. Now available in the U.S.

For use by or on the order of a licensed veterinarian.

There are a lot of factors working against a recovering animal.

Whether caused by calving, shipping, environmental conditions or almost any situation, stress can result in serious problems, especially in recovering animals.

Stress causes cortisol to be released into the bloodstream, which can impair the immune response, cause loss of appetite, increase susceptibility to disease and reduce growth rate. In addition to the effects of cortisol, appetite loss in stressed and convalescing animals can result in ketosis.

Catosal can be an important adjunct in hastening recovery and minimizing the effects of nutrient and mineral deficiencies related to poor feed intake.

You need the right supportive therapy for optimal recovery.

Catosal: the simple addition to therapy.

The first and only prescription vitamin B12 and phosphorus injectable, Catosal prevents and treats deficiencies of vitamin B12 and phosphorus. Vitamin B12 and phosphorus deficiencies may result in inappetence and stress, and may disrupt normal physiology.

As an adjunct therapy, Catosal provides B12, the vitamin compound associated with enhanced liver metabolism and an active healthy immune response, and Butaphosphan, a unique organic source of phosphorus.
